Solar Dynagraph Instructions for use:

The Solar Dynagraph has been designed to give you 45 possible combinations of really exciting new disco effects. For use with either the Optikinetics Solar 250 or Solar 100B projectors.

The set contains 10 fully interchangeable wheels and 2 wheel rotators.

Simply select any two Dynagraph wheels and fit one to each of the two wheel rotators. Slide the wheel rotators into the runners of your Solar projector and plug into the power sockets provided.

One of the wheel rotators has an extended spindle. Mount this rotor in the front runners for maximum image size, or in the rear runners if a smaller image size is desired. For maximum impact, adjust the focusing lens equalising the focus between the Dynagraph wheels.

The Solar Dynagraph may be used in conjunction with other Optikinetics attachments and lenses. Ask your dealer for a demonstration.

12V AC Operation

Made in England
